

Safety Lanyards for Bird and Acoustic Units

Birds and acoustic units represent a huge dollar investment for a seismic operation, and need to be protected. A single incident with a fishtrap in a hazardous area of operations can easily cost 6 figure sums just in terms of lost acoustic pingers and birds.

One way to protect your investment is with the use of Seismic Stuff safety lanyards. With this rope and stainless steel safety clip in place, even when the bird collar is broken, the bird or acoustic unit just slides back along the streamer and can be recovered with the streamer.

With thousands of lanyards already sold, they are a proven, cost effective, insurance against equipment loss.
